- 6. (Original) The method of claim 1, which further comprises producing a bonding layer on at least one of the bonding face of the donor wafer or on the support, or on both, to improve bonding strength therebetween.
- 7. (Original) The method of claim 6, wherein that the bonding layer is configured to form a buried insulator in the product substrate.
- 8. (Original) The method of claim 1, wherein transfer layer comprises a Group III-V semiconductor.
 - 9. (Cancelled)
- 10. (Original) The method of claim, wherein the transfer layer is made of indium phosphide.
- 11. (Original) The method of claim 10, wherein the foreign atomic species comprises at least one of iron or rhodium.
- 12. (Original) The method of claim 10, wherein the foreign atomic species comprises a shallow acceptor and a shallow donor.
- 13. (Original) The method of claim 1, wherein the implanted atomic species that forms the weakened zone comprises at least one of hydrogen ions and rare gas ions.
- 14. (Original) The method of claim 1, wherein the support material is mechanically stronger than the transfer layer.
- 15. (Original) The method of claim 1, which further comprises epitaxially growing an epitaxial layer on the transfer layer of the substrate after the detaching.
